SENTIMENTRI V2.0

Simplified Metrics Reference Guide

A client-facing reference guide detailing key performance metrics and algorithmic score compositions.

This document provides a clean, simplified explanation of the core auditing metrics used within Sentimentri. Use this reference sheet during your client meetings to explain how influencer profiles are qualified and campaigns are measured.

1. Senti Score v1.0 (Creator Quality Rating)

Weighted Overall Index

A proprietary 0-100 score indicating the overall health, authenticity, and response tier of a creator. It replaces basic follower counts with a multi-dimensional engagement evaluation.

```
Senti Score = (C1 * 30%) + (C2 * 30%) + (C3 * 20%) + (C4 * 20%)
```

SCORE TIER	RANGE	DESCRIPTION
ELITE	90 - 100	Industry leaders with highly authentic, responsive audiences.
STRONG	75 - 89	Highly recommended creators showing solid brand resonance.
AVERAGE	60 - 74	Healthy organic growth; stable audience response.
BELOW AVG / POOR	< 60	High bot activity, poor consistency, or negative sentiment patterns.

2. C1: Net Sentiment

Weight: 30%

Measures the direction of audience conversations, excluding neutral comments. Powered by Pidgin and English NLP lexicon mapping.

```
Net Sentiment = ((Positive - Negative) / (Positive + Negative)) * 100
```

3. C2: Resonance Efficiency (RE)

Weight: 30%

Evaluates how efficiently a creator converts attention (views) into actions (likes, comments, shares, saves, reposts). It is the geometric mean of AAR and CR.

```
RE = SquareRoot(AAR * CR)
```

* **AAR (Audience Activity Rate)**: (Views / Followers) * 100 [Max 100%]
* **CR (Content Resonance)**: (Engagement / Views) * 100

4. C3: Comment Quality Score (CQS)

Weight: 20%

Audits comments for authenticity. Substantive comments must be >= 4 words, excluding generic emojis, repetitive copy-pastes, and engagement pod group signatures.

```
CQS = (Substantive Comments / Total Comments) * 100
```

5. C4: Posting Consistency

Weight: 20%

Rates how consistently a creator publishes posts. Higher consistency keeps the audience warmed up and yields better campaign retention.

```
Posting Consistency = Gap between posts (Target: post every 2-3 days)
```

6. Audience Authenticity (Fake Follower Detector)

Independent Metric

Determines the genuine audience percentage. Automatically penalizes sudden spikes, low engagement ratios (ER < 0.5% with high followers), and suspicious likes-to-comments ratios (LCR).

```
Base Authenticity = 80% (adjusted based on ER & LCR checks)
```
